The State of the Nursing Workforce in Florida 2023

Florida Center for Nursing

Headquartered at the University of South Florida College of Nursing
12901 Bruce B. Downs Blvd., MDC 22
Tampa, FL 33612

Report Citation Information:

Florida Center for Nursing (2023). *The State of the Nursing Workforce in Florida*. Tampa, FL.

This report was prepared by Rayna M. Letourneau, PhD, RN, Executive Director, Florida Center for Nursing (raynaletourneau@usf.edu).

If you require this report in an alternate format, please contact us via email at FLCenterforNursing@usf.edu.

Acknowledgements

The Florida Center for Nursing is grateful for the widespread support it has received towards accomplishing the goals of this report. Specifically, the Florida Center for Nursing thanks Florida's licensed LPNs, RNs, and APRNs for completing our survey at the time of licensure renewal. This report would not be possible without their participation in our survey.

The Executive Director of the Florida Center for Nursing would also like to acknowledge the following individuals and organizations for their contributions:

Patricia Moulton Burwell, PhD
Director, National Forum of State Nursing Workforce Centers

Alec Jimenez
Data Engineer, Florida Center for Nursing

Abigail Carden, MPH, CPH
Data Engineer, Florida Center for Nursing

Ayesha Johnson, PhD
Assistant Professor, University of South Florida

Tracie Cooper, MS
Learning Designer, Florida Center for Nursing

Florida Board of Nursing

Florida Department of Health, Division of Medical Quality Assurance

Department of Information Systems Technology
School of Modeling, Simulation & Training
University of Central Florida

Florida Center for Nursing Board of Directors

Introduction

The Florida Center for Nursing (FCN) was established in 2001 to address issues related to Florida's nurse supply, demand, and shortages (Florida Statute §464.0195). Consistent with Florida statute (§464.0195), the FCN conducted a statistically valid biennial data driven analysis of the current supply and demand of the nursing workforce.

This report provides information about the supply and demand of Florida's nursing workforce. Scientific evaluation of data will allow the FCN to address issues related to the nursing workforce, including issues of recruitment, retention, and utilization of nurse workforce resources. The goal is to provide an ongoing strategy for the allocation of the state's resources directed towards nursing.

Regions of Florida

The Florida Center for nursing aggregates statewide and regional data. Regions are identified as northwest, north central, northeast, east central, west central, southeast, southwest, and south.

The **Northwest** region covers Bay, Calhoun, Escambia, Franklin, Gulf, Holmes, Jackson, Liberty, Okaloosa, Santa Rosa, Walton, and Washington counties.

The **North Central** region covers Alachua, Bradford, Citrus, Columbia, Dixie, Gadsden, Gilchrist, Hamilton, Jefferson, Lafayette, Leon, Levy, Madison, Marion, Suwannee, Taylor, Union, and Wakulla counties.

The **Northeast** region covers Baker, Clay, Duval, Nassau, Putnam, and St. Johns counties.

The **East Central** region covers Brevard, Flagler, Lake, Orange, Osceola, Seminole, Sumter, and Volusia counties.

The **West Central** region covers DeSoto, Hardee, Hernando, Highlands, Hillsborough, Manatee, Pasco, Pinellas, Polk, and Sarasota counties.

The **Southeast** region covers Indian River, Martin, Okeechobee, Palm Beach, and St. Lucie counties.

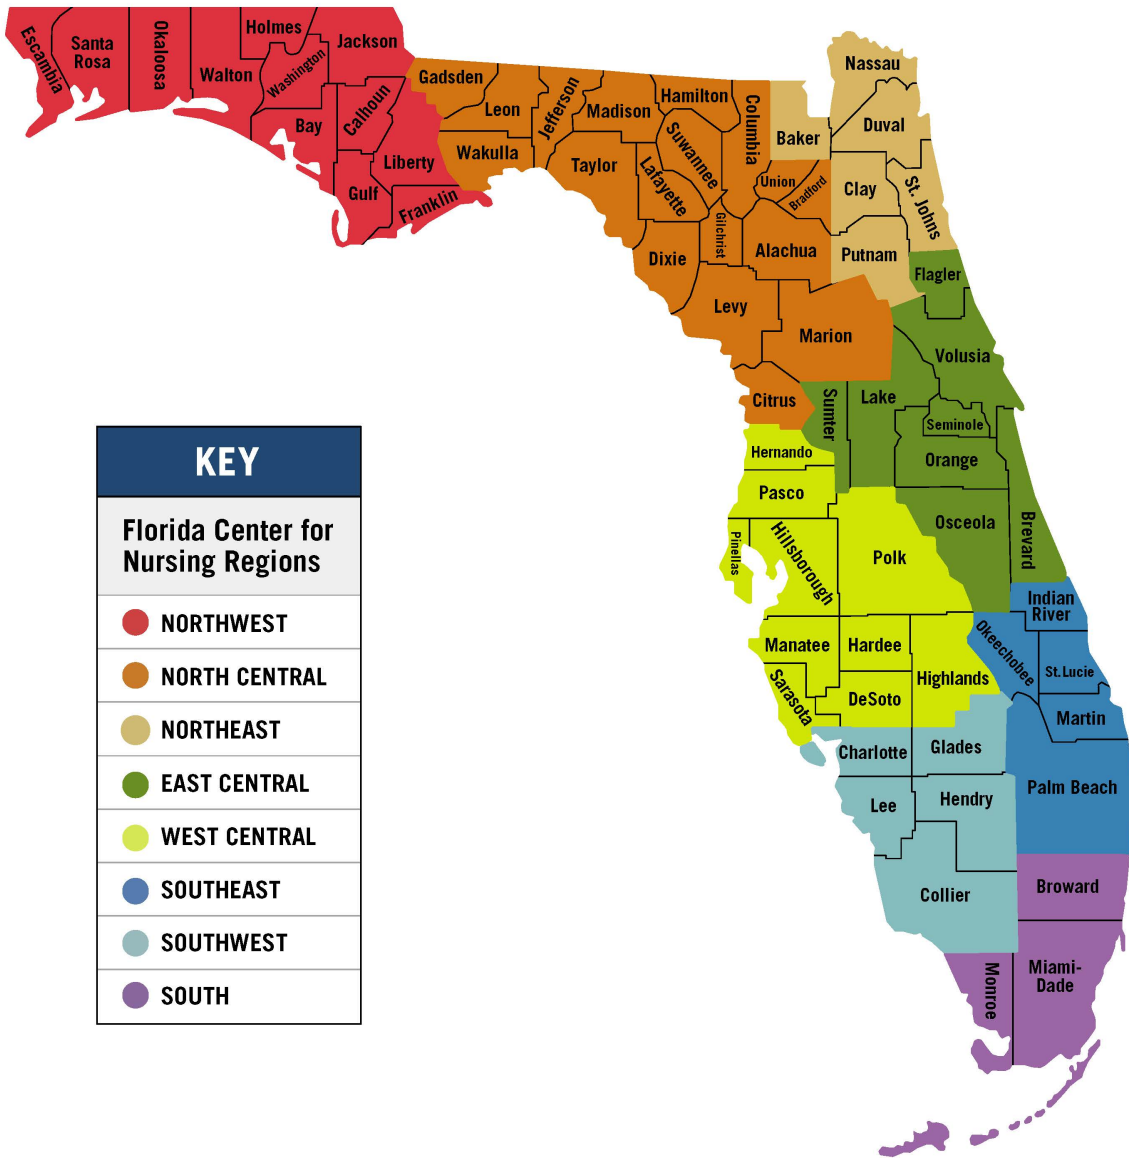

The **Southwest** region covers Charlotte, Collier, Glades, Hendry, and Lee counties.

The **South** region covers Broward, Miami-Dade, and Monroe counties.

The following map demonstrates the 8 geographic regions of Florida.

Supply of Nurses in Florida

Overview of Supply of Nurses in Florida

Since 2006, the FCN has obtained nurse licensure data from the Florida Board of Nursing (FBON) for analyses directed in statute. The FBON licensure database contains the most complete information specific to the regulation of Florida nurses, however the FBON licensure data do not include information about the work behavior or intention of nurses. Since 2008, the FCN has partnered with FBON and the Florida Department of Health, Division of Medical Quality Assurance (MQA) to integrate a voluntary Workforce Survey into the online nursing licensure renewal process. The Workforce Survey generates important data for workforce analysis, such as work status, hours worked, and highest degree held. Measurements include those established by the National Forum of State Nursing Workforce Centers minimum data set.

Supply Methodology

License Data

The Florida Department of Health, Division of Medical Quality Assurance (MQA) provided information for all licensed LPNs, RNs, and APRNs in the state. Variables obtained through MQA license data included age, sex, race/ethnicity, and address. Following the completion of a two-year license renewal cycle, the FCN extracted data from static files received from MQA. This data extract included records for each nursing license held in Florida by Licensed Practical Nurses (LPNs), Registered Nurses (RNs), and Advanced Practice Registered Nurses (APRNs). Renewal cycles are based on the licensee's expiration date of either April 30 or July 31.

Survey Design and Distribution

Additional data used for this report was collected using a survey instrument designed by the FCN called the FCN Nursing Workforce Survey (see Appendix A). Questions included in the FCN Nursing Workforce Survey were updated to coincide with the National Forum of State Nursing Workforce Center's Minimum Nurse Supply Dataset (MDS)¹. Other revisions made to the survey involved rephrasing of questions to simplify or shorten items for clarity, as well as adding response selections to be as inclusive as possible of all options. The survey instrument was offered electronically to all nurses at the time of licensure renewal.

¹ https://nursingworkforcecenters.org/wp-content/uploads/2021/12/National-Forum-Supply-Minimum-Dataset_September-2016-1.pdf

Using a unique file number as an identifier, workforce survey data were merged with licensure data. Duplicate cases were removed so that nurses holding more than one license (e.g., LPN and RN or RN and APRN) were not counted more than once in summary totals. The lowest level license was removed and only a nurse’s highest level license was used in summary totals. Because the FCN is primarily interested in the amount of nursing labor provided in Florida, licensure and survey data were cleaned and subset to isolate nurses who could reasonably be practicing nursing within the State of Florida. This subset is called the potential nurse workforce. To be included in the potential nurse workforce, licensees must hold an active license indicating eligibility to practice.

Statewide Comparisons to National Data

When appropriate, the statewide workforce data was compared to population data from the U.S. Census Bureau ² and the National Council of State Board of Nursing and the National Forum of State Nursing Workforce Centers’ national nursing workforce data. ³

Limitations

Responses to the FCN Nursing Workforce Survey are self-reported. As a result, there was a possibility of misinterpretation or confusion of the survey questions among the recipients. Likewise, non-response of individual survey questions may have impacted variable calculations.

Newly licensed nurses in Florida are not exposed to the FCN Nursing Workforce Survey until they renew their licenses for the first time, therefore the FCN Nursing Workforce Survey data does not represent the entire supply of Florida’s nursing workforce.

The FCN used available licensure information for non-respondents when possible.

The methodology utilized to remove duplicate cases from the data set assumes that nurses with multiple levels of licensure practice at the highest level of licensure. This assumption is not able to be verified with the data set utilized for analysis.

Statewide counts of active licenses include nurses who were classified as “Foreign”, “Out of State”, or “Unknown”, and may not reside in the State of Florida but do hold an active Florida nursing license. These cases were removed when reporting regional counts so that the sum of nurses in and across each region does not equal the statewide total.

The opportunity to ask nurses how COVID-19 impacted their job intentions was recognized, however an item could not be added to the FCN Nursing Workforce Survey until the next license renewal cycle. Hence, the FCN did not collect data regarding the impact of COVID-19 on

² U.S. Census Bureau. <https://www.census.gov/data.html>

³ Smiley et al. (2023). The 2022 National Nursing Workforce Survey. *Journal of Nursing Regulation*, 14(1), Supplement 2, S1-S90. [https://doi.org/10.1016/S2155-8256\(23\)00047-9](https://doi.org/10.1016/S2155-8256(23)00047-9).

nurses' employment intentions until 2022. The impact of COVID-19 on nurses' employment intentions will be reported in the next FCN nursing workforce report.

The FCN was not authorized to change licensing items or survey items related to gender, therefore only sex (male/female) data was collected and reported.

Finally, the supply study data were collected during licensure renewal cycles during a global pandemic (COVID-19). Because of this, some survey responses may have been affected as nurses potentially experienced changes to their normal employment routines during the survey distribution and data collection processes.

Supply Findings

During the 2020-2021 license renewal cycle, Florida was home to 441,361 active nursing licenses made up of 69,511 LPN; 326,669 RN; and 45,181 APRN licenses. Licensees held either single-state or multi-state licenses. Multi-state licenses made up 19.6% of LPN licenses, 22.2% of RN licenses, and 16.9% of APRN licenses.

There were 366,235 nurses in Florida (83%) that responded to the FCN Nursing Workforce Survey.

	Active Licenses	Responses	Response Rate
LPN	69,511	57,548	82.8%
RN	326,669	280,152	85.8%
APRN	45,181	28,535	63.2%
Statewide Total	441,361	366,235	83%

Statewide Demographic Characteristics

Age

The median ages of nurses were 48, 46, and 45 years for LPNs, RNs, and APRNs respectively. The mean age of LPNs was 47.7 and the mean age of both RNs and APRNs was 46.6. The table below provides a comparison of the ages of the LPNs, RNs, and APRNs that make up Florida’s nursing workforce to the U.S. nursing workforce and state and U.S. census data.

Age	FL LPNs	FL RNs	FL APRNs	FL NURSES	U.S. NURSES	Florida	United States
29 or younger	12.5%	14.8%	5.2%	11.2%	10.9%	33.7%	38.3%
30 - 39	21.8%	24.3%	31.5%	24.6%	24.2%	12.9%	13.6%
40 - 49	22.2%	20.6%	27.8%	21.5%	21.8%	12.1%	12.4%
50 - 59	22.3%	20.3%	21.1%	21.1%	21.4%	13.3%	12.9%
60 or older	21.1%	20.1%	14.4%	21.6%	21.7%	27.9%	22.8%

Sex

Florida has a higher percentage of male nurses compared to the national percentage. The table below compares the sex of the LPNs, RNs, and APRNs that make up Florida’s nursing workforce to the U.S. nursing workforce and state and U.S. census data.

Sex	FL LPNs	FL RNs	FL APRNs	FL NURSES	U.S. NURSES	Florida	United States
Female	90.0%	87.0%	83.9%	87.0%	89.0%	50.8%	50.5%
Male	10.0%	13.0%	16.1%	13.0%	11.0%	49.2%	49.5%

Race and Ethnicity

Florida’s nursing workforce is more diverse compared to the U.S. nursing workforce. The following table provides the race and ethnicity characteristics of the LPNs, RNs, and APRNs that make up Florida’s nursing workforce compared to characteristics of the U.S. nursing workforce and the population characteristics of Florida and the U.S.

Race/Ethnicity	FL LPNs	FL RNs	FL APRNs	FL NURSES	U.S. NURSES	Florida	United States
White	49.8%	59.3%	60.4%	57.9%	77.6%	52.7%	59.3%
Black	32.3%	14.6%	13.8%	17.3%	8.3%	15.5%	12.6%
Native	0.3%	0.2%	0.2%	0.2%	0.6%	0.3%	0.7%
Asian	2.5%	6.3%	5.2%	5.6%	7.2%	2.9%	5.9%
Other	2.3%	2.1%	2.0%	2.1%	3.4%	1.9%	2.5%
Hispanic	11.5%	16.1%	17.4%	15.5%	7.7%	26.8%	18.9%
Not Provided	1.3%	1.3%	1.0%	1.3%	-	-	-

Education

The following table provides the highest level of nursing education earned by the LPNs, RNs, and APRNs that make up Florida’s nursing workforce compared to the national workforce.

Highest Nursing Degree	FL LPNs	FL RNs	FL APRNs	U.S. LPNs	U.S. RNs
Vocational/PN Certificate	77.7%	-	-	71.8%	-
Diploma	11.1%	4.5%	0.6%	12.2%	4.1%
Associate Degree	9.7%	39.8%	0.8%	13.1%	24.3%
Baccalaureate	1.4%	44.6%	2.3%	2.9%	51.1%
Master's	0.1%	9.9%	83.9%	0.0%	17.9%
DNP	0.0%	0.8%	10.5%	0.0%	1.6%
PhD Nursing	0.0%	0.3%	1.4%	0.0%	0.9%
Other Doctoral	0.0%	0.1%	0.5%	0.0%	0.2%

In 2010, the Institute of Medicine (IOM), now known as the National Academy of Medicine, released *The Future of Nursing: Leading Change, Advancing Health*, a landmark report which called for increasing the number of baccalaureate-prepared nurses in the workforce to 80% by 2020.⁴ Florida continues to fall short of the IOM’s 80% goal, however there has been an increasing percentage of RNs in the workforce with a BSN or higher degree since 2017.

RN Educational Attainment	2017	2019	2021
ADN/Diploma	56%	49%	44%
BSN	36%	43%	45%
Graduate (any)	7%	8%	11%

Practice Characteristics

Geographic Distribution

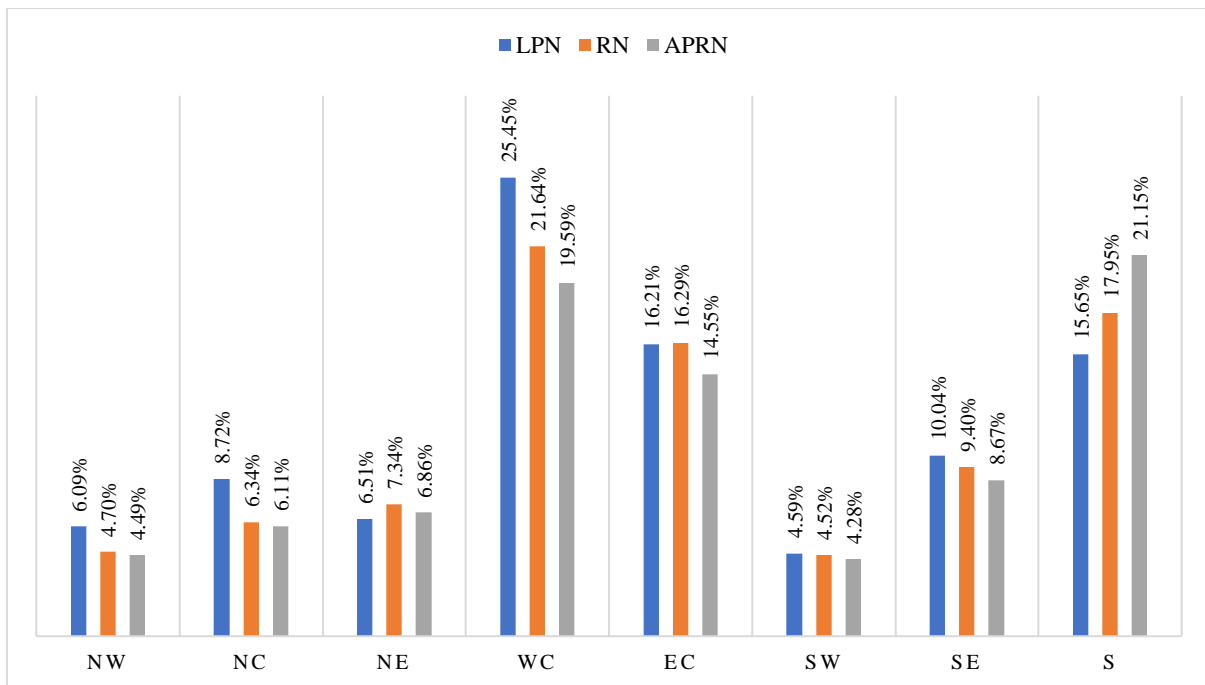

The West Central, South, and East Central regions contribute to more than half of the state’s nursing workforce. About 10% of the licensees live out of state and less than 1% of licensees live outside of the U.S. The table below lists the regional distribution of the state’s active nursing licenses.

⁴ Institute of Medicine. (2011). *The Future of Nursing: Leading Change, Advancing Health*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/12956>.

Regional Distribution of Florida's Nursing Workforce

When comparing the regional distribution of Florida's nursing workforce by license type, the West Central region is home to the largest percentage of LPNs and RNs, while the South region is home to the largest percentage of APRNs.

Workplace Setting

The majority of Florida’s LPNs work in an elderly care setting. Most of Florida’s RNs work in a hospital setting and the majority of APRNs work in hospital and physician practice settings.

	FL LPNs	FL RNs	FL APRNs
Hospital	6.3%	61.8%	37.1%
Home Health	17.4%	6.5%	2.4%
Physician	10.3%	3.1%	27.3%
Ambulatory Care	2.5%	4.8%	7.4%
Elderly Care	40.8%	8.4%	4.6%
Academic Setting	0.5%	1.6%	3.0%
Community Health	2.5%	1.2%	4.5%
Carceral	4.0%	0.8%	0.9%
Urgent Care/Walk-in	1.1%	0.5%	4.0%

Specialty Distribution

The top specialty that most closely corresponds to the nursing practice position of LPNs is geriatric care. The top specialties that most closely corresponds to the nursing practice positions of RNs are medical surgical and critical care. The top specialty that most closely corresponds to the nursing practice position of APRNs is adult/family health.

	FL LPNs	FL RNs	FL APRNs
Geriatric/Gerontology	30%	5%	4%
Medical Surgical	3%	13%	2%
Critical Care	1%	13%	4%
Adult/Family Health	11%	5%	28%
Home Health	14%	6%	1%
Emergency/Trauma	1%	7%	3%
Pediatrics	6%	4%	6%
Cardiology	1%	5%	4%
Psychiatric/Mental Health/Substance Abuse	4%	3%	5%

Operating Room	-	4%	1%
Rehabilitation (non-psychiatric)	4%	2%	-
Oncology	1%	3%	3%
Perioperative	-	4%	-
Palliative Care/Hos..	2%	2%	1%
Women's Health/OB-GYN	1%	2%	4%
Maternal-Child Health	-	2%	1%
Community	3%	1%	1%
Anesthesia	-	1%	15%
Neonatal	-	2%	1%
School Health	2%	1%	-
Nephrology	1%	1%	1%
Public Health	2%	1%	-
Telehealth	1%	1%	-
Information Technology	-	1%	-
Occupational health	-	1%	1%
Other Acute care	2%	3%	3%

Employment

Most of Florida’s nursing workforce hold full-time employment and work between 21-40 hours per week. A higher percentage of LPNs and APRNs report working more than 40 hours per week compared to RNs.

		FL LPNs	FL RNs	FL APRNs
Total Hours/Week	Up to 20 hours	5.6%	5.4%	6.1%
	21-40 hours	63.3%	69.3%	59.1%
	More than 40 hours	31.1%	25.3%	34.8%
Employment Status	Per diem	8.6%	7.9%	5%
	Part-Time	9.6%	8.2%	12%
	Full-Time	81.8%	83.9%	83%

Number of Years Licensed

The table and graphs below identify the years since initial Florida licensure.

Years Licensed in FL	FL LPNs	FL RNs	FL APRNs
0 or 1	13.1%	17.4%	25.7%
2-4	16.8%	18.7%	26.8%
5-9	21.3%	21.9%	22.2%
10-14	15.5%	11.8%	10.2%
15-19	11.1%	9.0%	6.0%
20 or more	22.3%	21.2%	9.3%

Intention for Future Work

Most nurses in Florida reported plans for the next 5 years include working the same as they currently do and advancing their education.

Employment plans for the next 5 years	FL LPNs	FL RNs	FL APRNs
Work the Same	45.9%	52.4%	65.2%
Advance Education	34.8%	32.0%	16.8%
Work Less	7.7%	8.7%	9.4%
Work More	11.9%	7.9%	6.6%
Leave / Retire	5.8%	7.2%	4.7%

Regional Supply of Nurses in Florida

Northwest Region

During the 2020-2021 license renewal cycle, the Northwest (NW) region, including Bay, Calhoun, Escambia, Franklin, Gulf, Holmes, Jackson, Liberty, Okaloosa, Santa Rosa, Walton, and Washington counties, was home to 21,704 active nursing licenses.

There were 18,551 nurses from the Northwest region (85.5%) that responded to the FCN Nursing Workforce Survey.

NORTHWEST REGION				
	Median Age	Mean Age	Active Licenses	Multi-State Licenses
NW LPNs	46	46.4	4,320	21.5%
NW RNs	46	46.3	15,354	25.9%

Demand for Nurses in Florida

Overview of Demand Trends for Nurses in Florida

The demand trends for nurses in Florida identify data as it is related to capacity of the nursing workforce and labor characteristics.

Demand Methodology

The analyses in this report are performed using data from state and national workforce databases. The data were analyzed in terms of nursing occupations for Licensed Practical Nurses (LPNs), Registered Nurses (RNs), Nurse Practitioners (NPs), Certified Registered Nurse Anesthetists (CRNAs), Nurse Midwives, and Nursing Faculty.

Limitations

Demand projections provide a statewide picture of demand and do not consider regional variation in the availability of health care facilities and jobs. In addition, demand projections could be impacted by several assumptions:

- Future employer demand is based on historical information. Changes in the health care facility utilization of nurses, increased utilization of different types of providers such as Medical Assistants, CNAs and other providers will impact future demand.
- Labor market estimates are based on the Bureau of Labor Statistics model and reflects employment modeling for all industries and does not entirely account for differences in the health care industry.
- Demand estimates include the historical turnover or churn of nurses. This includes the movement of nurses in the same facility to new positions, between employers and in and out of state.

Florida Specific Reports

The Florida Department of Economic Opportunity develops a **College Projections Report** that includes the Fastest Growing Occupations between 2020 and 2028. This report can be found at https://lmsresources.labormarketinfo.com/college_projections/index.html

The **2022-2023 Florida Statewide Demand Occupations list** ranks occupations based on several selection criteria including requiring at least a Postsecondary Adult Vocational (PSAV) certificate, college credit certificate or associate degree training, having 500 annual openings or an average growth rate of 1.6% or 1,200 annual openings with any positive growth, at least an average wage of \$16.14/hour and entry wage of \$13.18/hour and whether the occupation is a

high skill/high wage occupation with a mean wage of \$25.28/hour and entry wage of \$16.14/hour.

Florida also develops an annual report of number of **Online Job Ads** for Top Occupations in Demand in Florida requiring a bachelor's degree. This report utilizes data from The Conference Board, Help Wanted Online (HWOL). This report can be found at https://lmsresources.labormarketinfo.com/special/hwol_occupations_req_bachelors_florida.xlsx

Occupational Employment and Wage Statistics (OEWS)

This is a program of the U.S. Department of Labor, Bureau of Labor Statistics (BLS). This federal-state cooperative program produces employment and wage estimates for nearly 867 occupations. Each year the Florida Department of Employment Opportunity compiles occupational employment and wage estimates that feed into the National Bureau of Labor Statistics. The data are presented statewide, and regionally utilizing Standard Occupation Classification (SOC) codes. For more information go to <https://floridajobs.org/workforce-statistics/data-center/statistical-programs/occupational-employment-statistics-and-wages>

At the national level, estimates for a given reference period are based on a sample of 1.1 million business establishments collected in six semiannual panels for three consecutive years. Using six data panels to produce each set of estimates allows data to be produced at very detailed levels of occupation, geography, and industry, but it also means that sudden changes in staffing patterns or wages are reflected in the OEWS estimates only gradually. Data limitations for this data source include periodic changes in the SOC codes and analysis changes from year to year. For more information go to https://www.bls.gov/oes/current/oes_tec.htm

Bureau of Labor Statistics (BLS) Demand Projections

Long-term demand projections have been developed by the Florida Department of Employment Opportunity utilizing a national workforce projection model through the U.S. Bureau of Labor Statistics. Employment projections provide job seekers, policy makers, and training providers an idea of how many jobs exist within industries and occupations, how the number of jobs is expected to change over time, and what the future demand for workers will be. Projections show expected changes in employment by industry and occupation, the current and projected employment counts, estimated growth rates, and average annual openings. For more information go to <https://floridajobs.org/workforce-statistics/data-center/statistical-programs/employment-projections>.

Temporary employers and those with less than 50 openings are not included in the projections. In addition, employers provide job titles and descriptions which are then coded using the Standard Occupational Classification (SOC) system. This SOC system codes nurses as LPN, RN, Nurse

Anesthetists, Nurse Practitioners Nurse Anesthetists, and Post-secondary Nursing Instructors. Nurses serving in executive positions and in other types of positions would have different SOC codes. More information about this is available at https://www.bls.gov/oes/methods_21.pdf

Health Resources & Services Administration (HRSA) Health Workforce Simulation Model

The Health Resources and Service Administration (HRSA) recently released the HRSA Health Workforce Simulation Model (HWSM) projections. The interactive dashboard can be found by clicking the following link <https://data.hrsa.gov/topics/health-workforce/workforce-projections>. More information about this model can be found at: <https://bhw.hrsa.gov/data-research/projecting-health-workforce-supply-demand/technical-documentation/nursing/data>

Limitations of the HRSA model include modeling of long-term supply and demand workforce implications of COVID-19. The long-term implications of long-COVID-19 on provider demand is not well understood. The pandemic appears to have exacerbated already high burnout levels among many health care workers. HWSM supply inputs such as hours worked, and retirement patterns are based largely on pre-COVID-19 data. The model currently lacks a market mechanism where labor costs respond to imbalances between supply and demand. Another limitation is the utilization of American Community Survey Data or Occupational Employment and Wage Statistics (OEWS) data to estimate the starting year supply of many health occupations. Many states, however, have access to more complete supply data collected through the licensure/certification processes. There are more limitations included in the HRSA technical report.

Demand for Licensed Practical Nurses

The number of jobs for LPNs in Florida decreased by 12.19% between 2012 and 2021.

In 2021, Miami-Ft. Lauderdale-West Palm Beach region had the most LPN jobs.

According to the Florida Statewide Demands Occupation list, LPNs ranked 16th (2020-2021), 17th (2021-2022) and 28th (2022-2023) in highest number of annual job openings.

LPN jobs have a projected growth of 5,197 jobs (12.6%) from 2022-2030 with a total of 31,747 job openings over the eight-year period.

According to the HRSA Supply and Demand dashboard, the current shortage of LPNs is projected to grow through 2030. Please note that HRSA develops projections for Full-time Equivalent (FTE) rather than total count.

Florida LPN average hourly wages have grown by 16.57% from 2012 to 2021.

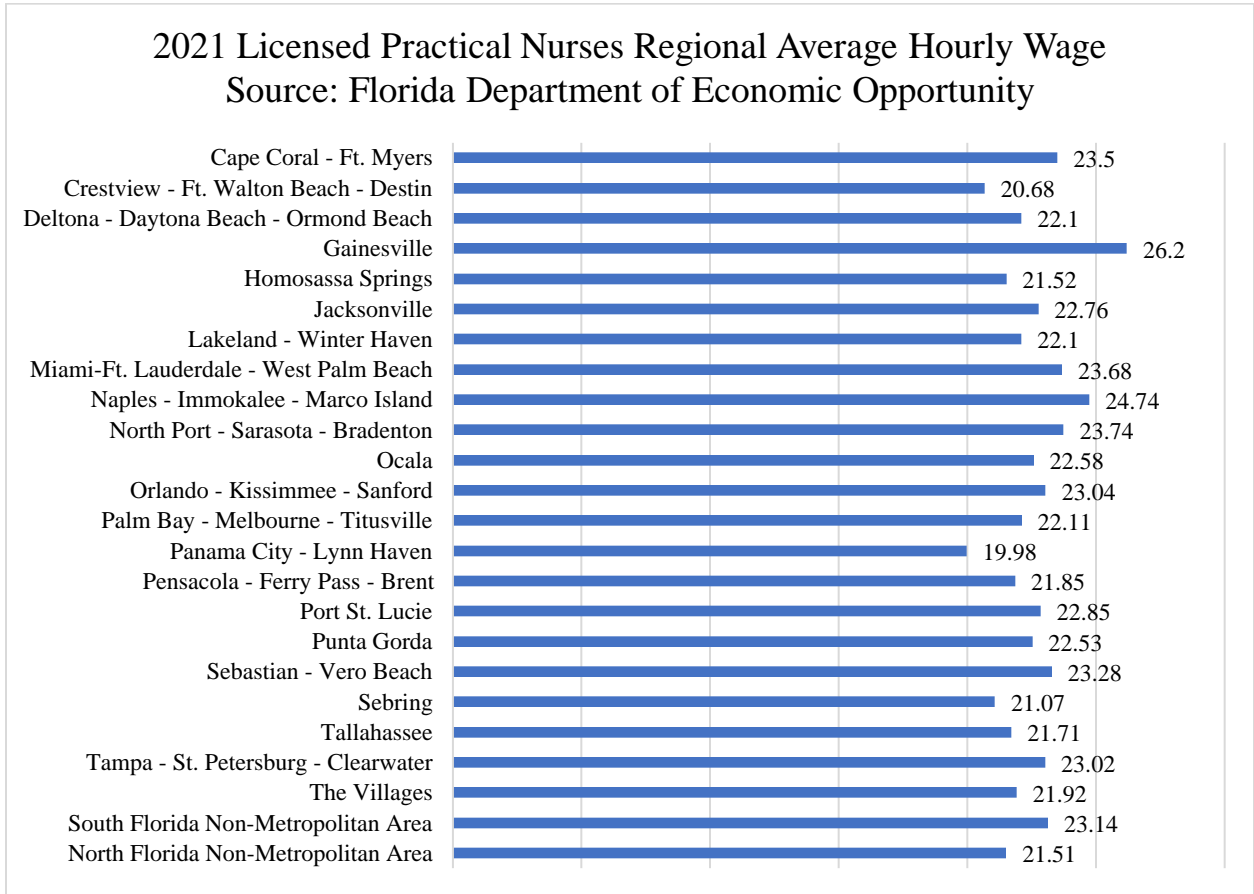

There is a small difference between mean and median hourly wages for Florida LPNs and a 32% difference between entry and experienced wages.

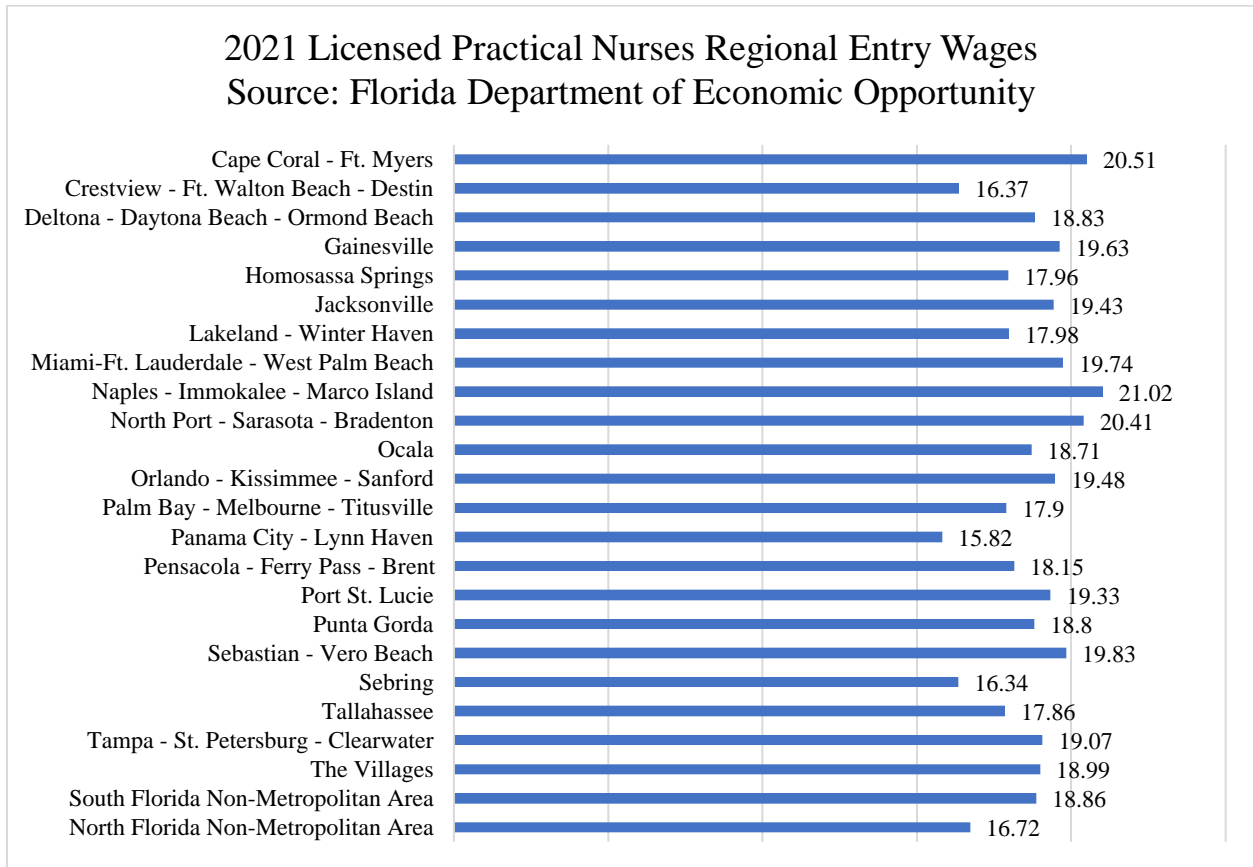

Note: Entry wage is defined as the average wage earned by the lowest third of all workers in that occupation. Experienced wage is defined as the average wage earned by the upper two-thirds of all workers in that occupation.

Florida LPN jobs in Gainesville have the greatest average hourly wage.

Florida LPN jobs in Naples-Immokalee-Marco Island have the greatest entry hourly wage.

Florida LPN jobs in Gainesville have the greatest experienced hourly wage.

Florida LPN hourly wages are higher than Georgia and Alabama but are below the national average.

Demand for Registered Nurses

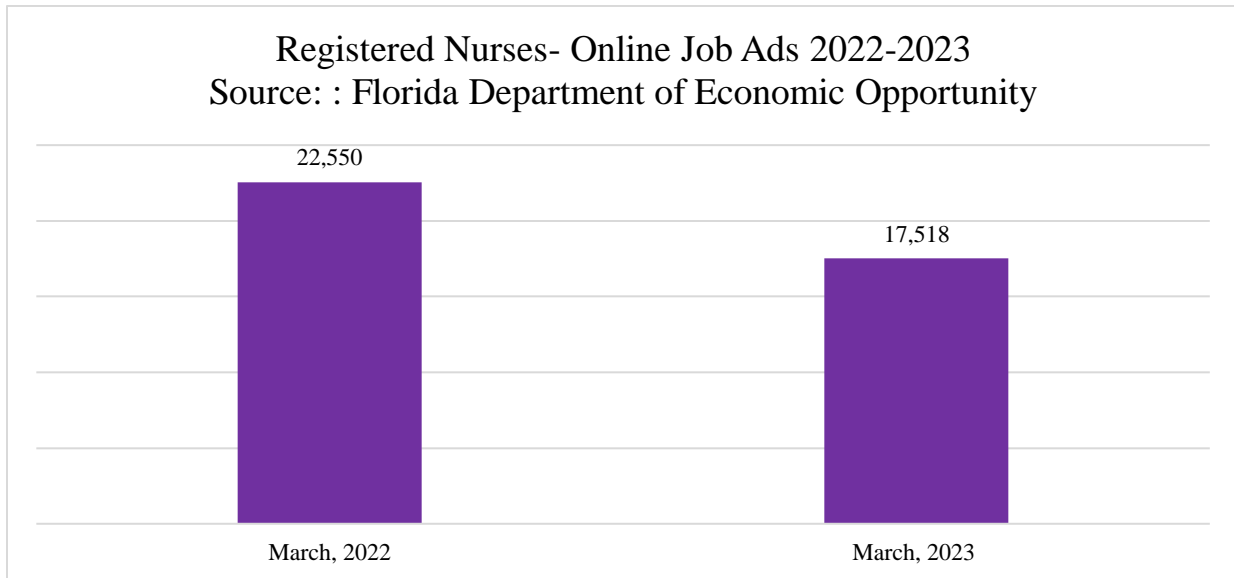

The number of jobs for RNs in Florida increased by 14.78% between 2012 and 2021.

In 2021, Miami-Ft. Lauderdale-West Palm Beach region had the most RN jobs.

Florida Nursing Faculty average wages are 42% lower than the Health Specialties Faculty which have the highest faculty wage. Health Specialty faculty include dentistry, laboratory technology, medicine, pharmacy, public health, therapy, and veterinary medicine.

Conclusion

The Florida Center for Nursing is optimistic that this report provides an accurate and robust depiction of the supply and demand of the nursing workforce in Florida. The FCN's study of supply and demand of the state's nursing workforce identifies the demographic and practice characteristics of Florida's nurses and what demand for each type of nursing looks like. It is important to utilize this data to make well-informed decisions related to policy that aligns with the educational and supply pipelines of nurses in the state.

Nurses are critical to the health and wellness of the people of Florida. Our state and the future of nursing in Florida is dependent upon implementation of innovative strategies to ensure an adequate supply of qualified nurses to meet the needs of our state and communities. The Florida Center for Nursing headquartered at the University of South Florida is poised to develop a statewide strategic plan for nursing manpower in Florida, implement strategies, and develop best practices for nursing in our state.

Appendix A.

Florida Center for Nursing (FCN) Nursing Workforce Survey for license renewal cycle 2020-2021.

Introductory Language:

In this section, the Florida Center for Nursing is asking you to provide information about your employment and educational attainment. Your answers are critical to estimate future need for nurses, to guide policy decisions, and to demonstrate the impact of nurse shortages in the State of Florida. No individual data will be reported; your responses will be combined and analyzed with those of all other nurses. Analysis of this information is published every 2 years in the FCN's Statewide Nurse Supply Reports.
